

INCREASING PROFIT MARGIN

Efficient
Profit making
Sustainability

Get your batteries
regenerated

Batteries regeneration,
environmental friendly
behaviour.

Batterie Plus is the world
leading company in
the battery regeneration
technology, with
regeneration centers
over the five continents.

The BRT 20 is the
most performing process
to regenerate all lead
(Acid, Gel, AGM...)

Regenerating your
batteries means
Battery life extended
100 to 150 % Running
cost cut.

Why buying new batteries...

Regenerating your battery, it's :
extending your asset life value
outperforming your batteries capacity.

Recover the original capacity of your batteries

Extend your battery life
+ 100% to
+ 150%

Efficiency
Profitability
Sustainability

Get your batteries regenerated

Less charging time for a greater efficiency

Environmental friendly involved !

BRT20® The most powerful regenerator available on the market.

Why buying a new battery when you can get yours regenerated...

Batterie plus technology is definitely not using chemistry. It is treating the batteries with an electric pulsation system using specific frequencies. This mix leads to the full recovery of the active agents in the battery turning them from solid back to their original status. Regenerating your battery leads to the recovery of its original capacity and to extend its life span from 100 to 150 %.

Operating a mix of curative and preventive regeneration programs will twice your battery life time, for a greater efficiency and a dramatic cut in your operating costs.

Battery original capacity recovery.

- Increase the battery performance.
- Boost your productivity.
- Reduce your electric consumption.
- Reduce significantly the electromechanically breakdowns.

BUREAU VERITAS

Made in France.
Three years manufacturer's warranty.

BRT20® is a trademark of Batterie Plus.

A profitable battery park

The BRT 20 efficiency has been proven for many years and is used worldwide. Battery manufacturers and sellers have always been promoting battery replacement. But economic and environmental present situation places the battery regeneration as a new solution, meeting above concerns.

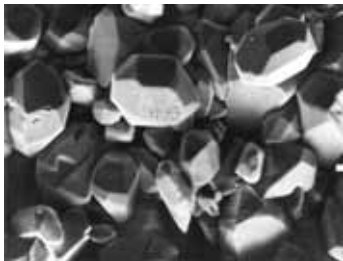

Added value

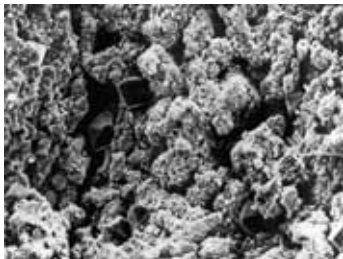

From the first operational year, your battery is already losing capacity. Five years later they are out of order.

All batteries, as it is built start losing capacity from the first operating year. On the fifth year, if reached, the battery is out of order and is replaced. With the Batterie plus technology, the BRT helps you recovering the original capacity of your battery, extending its life span.

Before regeneration: sulfated battery

After regeneration: Sulphate free lead plates.

BRT 20[®] performance:

- Operating 24h/day all along the year
- Work load capacity: up to 100 traction batteries yearly, or 60 car batteries daily.
- Efficiency range : batteries 6 to 120 V and 10 to 2500 A.
- Technology: Works on lead batteries with electrolyte, gel or AGM.

Curative regeneration results

Performing a curative or a regular preventive regeneration will lead to the full capacity recovery of your batteries.

LCIE

Full capacity recovery for
**150€
MAX**

BRT20[®] technology has been tested and approved by the Veritas LCIE body. Regeneration will help you cutting your battery budget. Battery life span is extended. The same battery can fit the full life of your lift truck. Forget about battery replacement, get your battery surviving you lift truck life.

SUPPLY CHAIN AND INDUSTRY PROFESSIONALS Getting involved in the regeneration process = Getting your operating margin lift up !

BRT20[®] purchase:

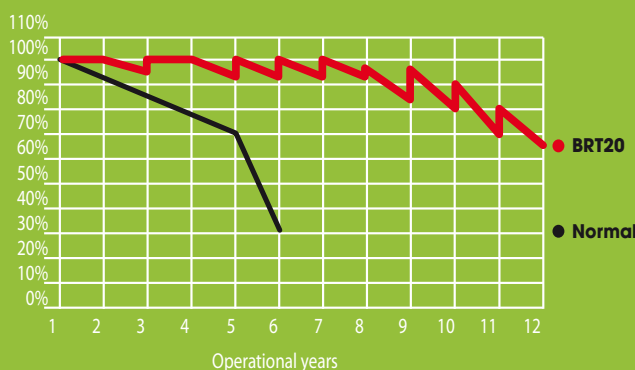

- Get your lift truck depreciation extended.
- Operating management through curative and preventive regeneration programs.
- Maintenance cost cutting.
- Forklift operator better performances.
- Less electromechanical breakdowns.
- Set up of equipment at your facilities.
- Training and online support.

BRT20[®] rental:

- Rental opportunities for at least 2 weeks.
- Including BRT20[®] and discharger analyzer.
- Set up of equipment at your facilities.
- Training and online support.

Preventive regeneration results

Regeneration expertise integration

Batterie plus
Global strategy
Regeneration worldwide

Batterie Plus regeneration service

Consulting Batterie Plus it is as getting the key to enter and master the regeneration servicing at your facilities or in an approved regeneration center. One will proceed to preventive and / or curative regeneration and the batteries will recover their original capacity.

Get your own regeneration center

Regeneration is a booming market. Battery and truck manufacturers left apart the preservation and maintenance line of business in the battery arena. Setting up a regeneration center will meet the outsourcing clients' needs. Regeneration is related to sustainability and profitability.

Regeneration workshop services :

- Any lead technology battery brand.
- Battery analysis:
 - Cleaning.
 - Connector check.
 - Voltage and density check.
 - Discharge analysis.
 - Faulty cell replacement.
 - Electrolyte density recovery.

BRT20[®] is manufactured in France and meets international technical and safety requirements. Regeneration process is easier thanks to simple manual or automatic program settings in several languages. Sensor equipment in the BRT20[®] ensures great safety with the control of voltage, temperature, amperage, short-circuit analysis... BRT20[®] is the result of several years of R&D, experiments and stringency. Batterie plus is now supplying the BRT20[®] technology to the greatest industries in France and worldwide.

All range of lead technology batteries

Immediate profitability
